NRC Regional Office to Discuss Davis-Besse Steam Generator Installation: Webinar to be Held on February 20

The Nuclear Regulatory Commission's Region III office will hold a webinar Feb. 20 to discuss inspection efforts for Davis-Besse's installation of two steam generators and how the agency's activities help ensure the public and environment are protected.

"We are committed to having discussions about the NRC's oversight of nuclear power plants," said NRC Region III Administrator Cynthia D. Pederson. "This webinar will give us an opportunity to continue the dialogue with the public about issues of interest to them."

The NRC Region III office, located in Lisle, Ill., will explain our regulations, discuss our inspection process and answer questions associated with the plant's new steam generator installation.

The webinar will be held from 6:00-7:00 p.m. EDT (5:00-6:00 p.m. CDT). Participants will be able to view presentation slides prepared by NRC staff and submit questions in writing over the Internet. Interested members of the public must [register online](#) or follow the instructions on the meeting notice in order to participate.
