

**SUMMARY OF TELECONFERENCE WITH
GE HITACHI VALLECITOS NUCLEAR FACILITY TO
DISCUSS SECURITY REQUIREMENTS
LICENSE NO. SNM-960**

DATE: October 24, 2014

PARTICIPANTS: See Attachment

PURPOSE: The purpose of this secure teleconference was to discuss comments related to the set of security requirements that U.S. Nuclear Regulatory Commission (NRC) is considering formalizing as the licensing basis for the Special Nuclear Material (SNM)-960 license. The expectation is that these requirements will be included in a Confirmatory Order to the licensee.

DISCUSSION: These security requirements are Safeguards Information and, therefore, not available to the members of the public. During the teleconference, the staff discussed with GE Hitachi the phrasing of specific requirements to ensure that the requirements will be clear to both the NRC and the licensee. Several items require additional discussion to ensure that the requirements will be clearly defined and understood. A subsequent secure teleconference to discuss the remaining items was tentatively scheduled for November 6, 2014.
