

**SAFETY INSPECTION REPORT AND COMPLIANCE INSPECTION**

<b>1. LICENSEE/LOCATION INSPECTED:</b> TechCorr USA, LLC Temporary job site locations in Gillette, Wyoming Field office: 305 Commerce Street, Gillette, Wyoming		<b>2. NRC/REGIONAL OFFICE</b>  U.S. Nuclear Regulatory Commission Region IV, 1600 East Lamar Blvd Arlington, Texas 76011-4511	
REPORT NO: 2014-002			
<b>3. DOCKET NUMBER</b> 030-37457	<b>4. LICENSE NUMBER</b> 42-29261-01	<b>5. DATE OF INSPECTION</b> September 26 – October 9, 2014	

**LICENSEE:**

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy to exercise discretion, were satisfied.

Non-Cited Violation(s) was/were discussed involving the following requirement(s) and Corrective Action(s):

- 4. During this inspection certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11. (Violations and Corrective Actions)

10 CFR 34.35(b) states that "The licensee may not transport licensed material unless the material is packaged, and the package is labeled, marked, and accompanied with appropriate shipping papers in accordance with regulations set out in 10 CFR Part 71."

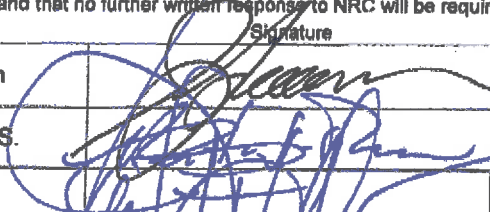

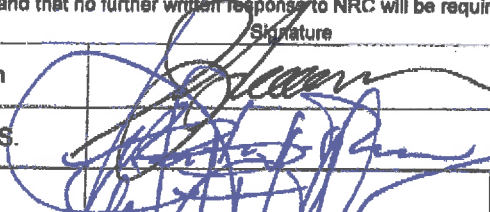

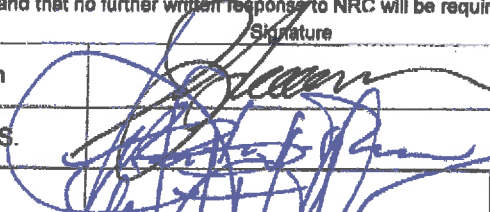

Contrary to the above, on October 7, 2014, the licensee transported a radiography camera (Type B package) to a temporary job site with both labels completely illegible. Specifically, the licensee transported a radiography camera without adequate radiation labels containing radionuclide, activity, and transport index information.

This is a Severity Level IV violation (Example 6.8.d.4).

As part of the short term corrective action, the corporate radiation safety officer instructed the site radiation safety officer (RSO) to re-train the authorized users on the importance of ensuring that radiography cameras are labeled appropriately and contain regulatory required information. Long term corrective actions includes: 1) posting signs on the vault door and inside the vault reminding users to verify that the labels are in place before transporting cameras, 2) all users are to ensure that cameras comply with the regulation before logging out a camera, and 3) the site RSO will be checking cameras frequently to ensure that the labeling is up to date.

**Licensee's Statement of Corrective Actions for Item 4, above.**

I hereby state that, within 30 days, the actions described by me to the inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.
