Changes to Unertl Optical Company, Inc (UOC) Materials License – 27-23901-01E, Docket 030-36310

Mr. Rodriguez-Luccioni;

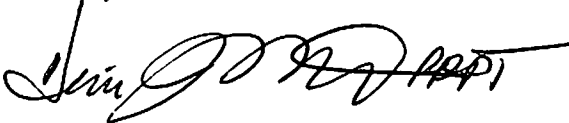

In accordance with the conditions for the noted license, I understand that the license expired on 31 January 2014 and was not timely renewed. As a result of this change, UOC understands that it is no longer allowed to distribute radioactive materials under this NRC licensing.

Per our discussion, I've met with Rocky (Green) and we (UOC) have determined that a new license application is not currently an action we are planning. The opportunities rendered by a RM distribution license may present themselves in the future, but the effort and responsibilities associated with this type of licensing are not in our immediate view.

Thank you very much for working with us until we could make these determinations and I look forward to working with you in the future – should we decide to seek a new distribution license for our radioactive materials. We will be maintaining our NV possession license, which will allow us to continue to be good servants with regard to our existing radioactive materials.

Please call immediately if you have any problems, questions, concerns, or issues...or if you don't. Thanks so much for your time.

Sincerely,

Dixie Wells-O'Dou, RRPT
Radiation Safety Officer, UOC
