READ TO THE EXAMINEE

I will explain the initial conditions, which steps to simulate or discuss, and provide initiating cues. When you complete the task successfully, the objective for this job performance measure will be satisfied.

Initial Conditions:

In preparation for 2-PT-M048, 480 Volt Undervoltage Alarm, the following Tech Spec LCOs were not met:

- 3.3.5 Loss of Power Diesel Generator Start Condition G and H
- 3.8.1 AC Sources Operating Condition B
- Surveillance W-19 is complete

The following plant conditions exist:

- The unit is in Mode 3
- During the performance of 2-PT-M048 the normal feed breaker to bus 6A tripped.
- 21 and 22 EDGs started
- The normal supply breakers for 5A, 2A, and 3A tripped
- The Emergency Feed Breakers for safeguards busses 5A, 2A, and 3A closed and re-energized the buses.
- 21 AFW pumps started
- 21and 22 CCW pump started
- 21 and 22 Service Water Pumps started

Initiating Cue: You are the FSS and the Shift Manager has directed you to determine any additional required Tech Spec actions and reportability requirements.

READ TO THE EXAMINEE

I will explain the initial conditions, which steps to simulate or discuss, and provide initiating cues. When you complete the task successfully, the objective for this job performance measure will be satisfied.

Initial Conditions:

- 1. Reactor power is stable at 100% power.
- 2. The RO has calculated a QPTR manually.
- 3. There is indication of a misaligned rod. The RO calculated a QPTR of 1.0638 and recommends a Power Reduction to $\leq 80.7\%$.
- 4. No Physics testing is in progress.
- Initiating Cue: You are the CRS and the SM directed you to review the QPTR and sign as SM Designee and, approve any required actions by Tech Spec identified including maximum allowable power operation and time limits.

Required Materials: Calculator

General References: 3-SOP-15.3, Quadrant Power Tilt Calculation DSR-4B Unit Two Quadrant Power Tilt Calculation Sheet

Time Critical Task: No

Validation Time: 20 Minutes

Task Standard: Calculation reviewed and errors corrected, identify incorrect TS actions.

Page 3

Performance Information

(Denote critical steps with a check mark $\sqrt{}$)

EVALUATOR NOTE:

Give the examinee the attached Detector Current Data Sheet and a DSR-4B form that has the proper normalization factors recorded.

EVALUATOR NOTE:

A detector Current Data Sheet with ANRT/B and QPTT/B is provided for grading this JPM. Allow examinee to complete all calculations and determine appropriate Tech Spec actions. The examinee may use a calculator.

1. Performance Step: Obtain correct procedure and form DSR-4B.

Standard:

SOP 15.3, "Quadrant Power Tilt Calculation"

Comment:

2. Performa	nce Step:	Check top and bottom detector currents recorded.
Standard:		Checks Detector currents recorded from QPTR Data Sheet recorded
Comment:	incorrectly er was entered N42 top. Candidate m	R calculation, the values for N42 top and N42 bottom were ntered in the wrong location. The current value for N42 top in N42 bottom and N42 bottom was entered in location for ay identify error at this time. ay elect to calculate independently and compare results.

* Current QT number and Normalization Factors provided by Reactor Engineer.

 Determine normalized ratios by dividing indicated detector current by normalization factor as follows: [ITS] <u>Technical Requirements Manual 3.2.A:</u>

Channel Det Current Nor Ratio	Channel Det Current Nor Ratio
41 Top = 41T = <u>139.7</u> /* <u>129.1 = 1.0821</u>	41 Bottom = 41B = <u>128.7</u> /* <u>122.5</u> = <u>1.0506</u>
42 Top = 42T = <u>145.3</u> /* <u>136.6</u> = <u>1.0637</u>	42 Bottom = 42B = <u>120.4</u> /* <u>144.3</u> = <u>.8344</u>
43 Top = 43T = <u>122.9</u> /* <u>118.3</u> = <u>1.0389</u>	43 Bottom = 43B = <u>124.2</u> /* <u>119.3</u> = <u>1.0411</u>
44 Top = 44T = <u>89.4</u> /* <u>87.4</u> = <u>1.0229</u>	44 Bottom = 44B = <u>109.7</u> /* <u>107.1</u> = <u>1.0243</u>

Determine the average normalized ratio for the top and bottom.

Average Normalized Ratio Top = ANRT = $\frac{41T + 42T + 43T + 44T}{4}$ = 1.0519

Average Normalized Ratio Bottom = ANRB = <u>41B + 42B + 43B + 44B</u>= <u>.9876</u>

Determine The quadrant power tilt ratio for the top and bottom by dividing the highest normalized power ratio for the top and bottom respectively by their respective average normalized ratio. [ITS] Technical Requirements Manual 3.2.A:

Quadrant Power Tilt Top = QPTT = <u>Highest value of 41T, 42T, 43T, or 44T</u>

Quadrant Power Tilt Bottom = QPTB = Highest value of 41B, 42B, 43B, or 44B

 Value
 1.0506

 QPTB =
 ANRB =
 .9876 =
 1.0638

The higher of the two guadrant power tilts should be less than or equal to the Technical Specification Limit of 1.0200. [ITS] Technical Requirements Manual 3.2.A:

Enter the Higher QPT(Top or Bottom) = 1.06 38Technical Specification Limit = 1.02 00

NOTES:

ANRB

If the quadrant power tilt exceeds the Tech. Spec. limits, the SM, OM, RE and GM-NPG shall be informed ASAP.

2. If one detector is out of service, the three in service detectors will be used to compute the average normalized ratios (ensure denominators in step 2 are changed from 4 to 3).

READ TO THE EXAMINEE

I will explain the initial conditions, which steps to simulate or discuss, and provide initiating cues. When you complete the task successfully, the objective for this job performance measure will be satisfied.

Initial Conditions:

- The unit is operating at 100% power
- Flushing of fire hydrants in the transformer yard is underway.
- #25 HP Hydrant and its associated PIV cannot be closed
- Water is not spraying on any electrical equipment.

Initiating Cue:

You are the CRS and you have been directed to:

- determine the valves that must be closed to isolate the leaking hydrant
- identify affected components
- determine compensatory actions.

Required Materials: None

Initial Conditions

Initial Conditions:

- The unit is operating at 100% power
- Flushing of fire hydrants in the transformer yard is underway.
- #25 HP Hydrant and its associated PIV cannot be closed
- Water is not spraying on any electrical equipment.

Initiating Cue:

You are the CRS and you have been directed to:

- determine the valves that must be closed to isolate the leaking hydrant
- identify affected components
- determine compensatory actions.

I will explain the initial conditions, which steps to simulate or discuss, and provide initiating cues. When you complete the task successfully, the objective for this job performance measure will be satisfied.

Initial Conditions:

- The Unit is operating at 100% power.
- Liquid Waste Distillate Storage Tank #13 is to be discharged, tank level, as reported by the NPO, is 97 inches.
- LWDST has been isolated.
- R-54 source check failed.
- 6 Circulating Water Pumps are operating at slow speed.
- No dilution flow is borrowed from Unit 3.
- A Manual Radioactive Liquid Release Permit was prepared.
- Additional Data:

I will explain the initial conditions, which steps to simulate or discuss, and provide initiating cues. When you complete the task successfully, the objective for this job performance measure will be satisfied.

1

Initial Conditions:

The Current Time Is 0223

The Unit was operating at 100% power At 0200

- A small feedwater break occurred on the suction to 21 MBFP
- The crew attempted to trip the reactor, but the reactor trip breakers failed to open
- The crew is performing actions in FR-S.1, Response to Nuclear Power Generation/ATWS
- The Turbine ws Tripped

• Reactor Power is 42% and lowering.

At 0204

- Both Main Boiler Feed Pumps were tripped
- All AFW Pumps started

At 0206

• Conventional NPO reports that he is unable to trip the reactor locally. At 0210

- A steam break occurs upstream of PCV-1139, 22 AFW Pump Steam Supply Pressure Control Valve
- All Wide Range levels are 45% and lowering

At 0217

• The harsh environment in the ABFP room caused both Motor Driven AFW Pumps to trip.

At 0223 (NOW)

• The conventional NPO reports that the Rod Drive MG Sets are secured and the reactor is tripped

Meteorological Conditions:

- Wind Speed: 2.2 meters/second
- Wind Direction: 55 degrees @ 10 meters
- Stability Class: B

Initiating Cue:

You are the CRS and the SM is unable to get to the control room. Classify the event and complete the Radiological Emergency Data Form.

Required Materials: EAL Wall Chart.
