SUBJECT:  
Beaver Valley Power Station, Unit No. 2  
Docket No. 50-412, License No. NPF-73  
Steam Generator Tube Inspection Report – Technical Specification 5.6.6.2

In accordance with Beaver Valley Power Station, Unit No. 2 Technical Specification 5.6.6.2, "Unit 2 SG Tube Inspection Report," FirstEnergy Nuclear Operating Company hereby submits the steam generator tube inspection results. The enclosed report provides information required by the technical specifications that was obtained during inspections conducted during the spring 2014 refueling outage.

There are no regulatory commitments contained in this submittal. If there are any questions or if additional information is required, please contact Mr. Thomas A. Lentz, Manager – Fleet Licensing, at (330) 315-6810.

Sincerely,

Eric A. Larson

## **Information Required by Technical Specification 5.6.6.2.1**

Technical Specification (TS) 5.6.6.2.1 requires reporting of the following information after completion of an inspection performed in accordance with the Specification 5.5.5.2, Unit 2 Steam Generator (SG) Program. Information required by TS 5.6.6.2.1.a through TS 5.6.6.2.1.i is provided below for activities performed during the spring 2014 refueling outage (2R17).

Refer to the Definitions of Abbreviations, Codes and Reporting Terminology section (Page 8) of this report for abbreviations, codes and other nomenclature used throughout this report.

### **a) The scope of inspections performed on each SG:**

#### Primary Side:

##### Bobbin Coil Probe

- 100% of the inservice tubes, full length (except Row 1 and 2 U-bends) per Generic Letter (GL) 95-05, "Voltage-Based Repair Criteria for Westinghouse Steam Generator Tubes Affected by Outside Diameter Stress Corrosion Cracking," dated August 3, 1995
- 100% of the hot leg sleeved tubes in Rows 3 & 4 from the top of the sleeve to the 8<sup>th</sup> TSP using a 0.630" wide groove probe

##### Plus Point Probe

- 100% of Row 1 and 2 U-bend region
- 100% of the hot leg TTS from 6 inches above to 3 inches below the TTS<sup>NOTE 1</sup>
- 100% of TSP DSI/DNI indications with a bobbin coil voltage > 2.0 volts
- 100% of TSP mix residual signals  $\leq 55^\circ$  and  $\geq 1.25$  volts
- 100% of TSP mix residual signals  $\geq 2.0$  volts
- 100% of dented hot and cold leg TSP intersections  $\geq 5.0$  volts
- 100% of dents  $\geq 2.0$  but  $< 5.0$  volts at the 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> and 4<sup>th</sup> hot leg TSP's
- 100% of dents located at AVB intersections (+/- 1 inch of AVB centerline)
- 100% of freespan dings  $\geq 1$  volt
- 100% of BLG and OXP signals in the hot leg tubesheet below the F\* distance but above the tubesheet neutral axis
- 100% of BLG and OXP signals above the cold leg TTS
- 100% of bobbin "I-codes," such as freespan differential signals meeting the change criteria (Change criteria: phase rotation  $> 10^\circ$  and/or voltage amplitude  $> 0.5$  volts)
- 100% of freespan signals not resolved as MBMs or without a historical review
- 100% of Westinghouse Alloy 800 sleeves
- 25% of Row 3 through 8 U-bend region
- 25% of TSP mix residual signals  $> 1.5$  volts but  $< 2.0$  volts
- 20% of the cold leg TTS from 6 inches above to 3 inches below the TTS (SG B only)<sup>NOTE 1</sup>
- Bounding of historical plugged tubes due to foreign object wear at the TTS and newly reported PLP signals

NOTE 1 - For those tube locations where the expansion transition is located deeper into the tubesheet, the inspection distance into the tubesheet was adjusted to 5 inches below the top of the tubesheet to ensure adequate inspection coverage of the F\* distance.

## **Primary Side Visual Examinations**

- There are 9 hot leg and 9 cold leg tube locations (SG A - 4; SG B - 2; SG C - 3) which contain Alloy 600 plugs repaired with the Westinghouse Plug-in-Plug (PIP) technique. These locations are visually examined each outage to assess the condition of the tack weld which holds the PIP in place. All PIP tack welds were determined to be acceptable.
- A remote visual inspection of the area around the channelhead drain line was performed in each hot and cold leg channelhead to meet the requirements of Westinghouse Nuclear Safety Advisory Letter 12-1, "Steam Generator Channel Head Degradation." Included in this examination was (a) the divider plate to stub runner weld, (b) the tubesheet to stub runner weld and (c) the divider plate to channelhead weld. This inspection looked for evidence of gross defects such as indications in welds, missing weld filler material, a breach in the weld metal, and unusual discoloration of the weld metal and/or cladding imperfections. All inspections were determined to be acceptable.
- 100% of tube plugs (as-found and as-left condition). As part of the routine steam generator inspection process, a visual examination is performed each time the primary side is opened to document the condition of the hot and cold leg channelheads. This process also includes tube plug accountability. During 2R17, as well as in all prior outages, the examinations verified that the correct number of tube plugs were present and in the proper tube locations. All plugs were determined to be acceptable.

## **Secondary Side:**

- A visual inspection of the secondary side tubesheet face, annulus and tube lane was performed during 2R17 in all 3 steam generators. No material was visually observed in any of the SG's that required retrieval.
- For those tube locations where potential loose part indications were reported during the 2R17 eddy current examinations (e.g., bobbin coil or Plus Point probes) and no visual inspection was performed at those particular tube locations, the Plus Point probe was used to verify that no degradation or tube wall wear was present. These tubes remained in service.
- SG B & C steam drum - A visual inspection was conducted of the steam drum to assess the general condition of the internal components (e.g., accessible portions of the primary and secondary moisture separation equipment, risers, drain lines, welds, integrity of surrounding structures, feedwater header, J-nozzles, etc). The general condition of the steam drum was determined to be acceptable. Ultrasonic thickness measurements were taken at selected areas of the feedwater header in both SG's. No minimum wall conditions were reported.

### **b) Active degradation mechanisms found: <sup>NOTE 2</sup>**

The following existing degradation mechanisms were reported during 2R17:

- Axial ODSCC at non-dented TSP intersections
- Axial ODSCC in the hot leg sludge pile region
- Axial ODSCC at the hot leg TTS expansion transition region
- Axial PWSCC at the hot leg TTS expansion transition region
- Circumferential ODSCC at the hot leg TTS expansion transition region
- Axial ODSCC at > 5 volt freespan dings
- Wear at AVB locations
- Volumetric indications associated with sleeved tubes

NOTE 2 - Per the EPRI, "Steam Generator Management Program: Steam Generator Integrity Assessment Guidelines," Revision 3, the word "existing" is now used in lieu of the word "active" when describing degradation that has been previously and/or currently observed in the steam generators.

**c) Nondestructive examination techniques utilized for each degradation mechanism:**

For the degradation mechanisms observed during 2R17, bobbin coil probes were used as the primary method of detection except at or below TTS and in Row 1 and 2 U-bends where bobbin probes are not qualified. In these areas, Plus Point probes were employed. Plus Point probes were also used to re-examine any ambiguous bobbin coil signals that were reported.

The 2R17 examination techniques were qualified, for detection and sizing (as applicable) of the existing and potential degradation mechanisms listed in the 2R17 degradation assessment, in accordance with Appendices H and I of the EPRI, "Steam Generator Management Program: Pressurized Water Reactor Steam Generator Examination Guidelines: Revision 7."

## 2R17 Examination Techniques Used for Degradation Detection/Sizing

Degradation Mode	Tube Location	Probe	EPRI ETSS*
Axial ODSCC	H/L sludge pile, expansion transitions	Bobbin	I28413
		3 Coil Plus Point	I28424
Circumferential ODSCC	H/L expansion transitions	3 Coil Plus Point	21410.1
Axial PWSCC	H/L sludge pile, expansion transitions	3 Coil Plus Point	20511.1
Axial ODSCC	Non-dented & dented H/L TSP's (Bobbin < 5 volts, Plus Point ≥ 5 volts)	Bobbin	I28411
		3 Coil Plus Point	22401.1 I28424
Axial ODSCC	Freespan dings > 5 volts	3 Coil Plus Point	22401.1
Volumetric	Top of tubesheet	3 Coil Plus Point	21998.1
Wear	AVB locations	Bobbin	96004.3
		1 Coil Plus Point	21998.1

\* The applicable EPRI Examination Technique Specification Sheet (ETSS) is listed for reference only.

Site-specific ETSS's are developed prior to each steam generator inspection for each existing and potential degradation mechanism identified in the 2R17 degradation assessment. The site-specific ETSS's are developed in accordance with Appendices H and I of the EPRI, "Steam Generator Management Program: Pressurized Water Reactor Steam Generator Examination Guidelines: Revision 7."

The examination techniques utilized during 2R17 are considered "Site Validated" as defined in the EPRI, "Steam Generator Management Program: Pressurized Water Reactor Steam Generator Examination Guidelines: Revision 7," for each existing and potential degradation mechanism listed in the 2R17 degradation assessment.

**d) Location, orientation (if linear), and measured sizes (if available) of service-induced indications:**

The 2R17 Steam Generator Examination Results section of this report lists information that includes the location, orientation and measured sizes of service-induced indications. Further explanation of the information provided in these tables is given below:

- 1) Bobbin probe indications reported as "I-codes" (i.e., DNI, DSI, DTI or NQI) were re-inspected with the Plus Point probe.
- 2) Bobbin probe indications reported as PSI were re-inspected with the Plus Point probe. If the Plus Point probe indicated a possible TSP ligament breach existed (CSI), it was further evaluated by the original equipment manufacturer (OEM) engineering group. All ligament breach extents were found to be acceptable for continued plant operation.
- 3) New AVB indications reported from the bobbin probe listed as PCT were inspected with the Plus Point probe. If the Plus Point probe indicated no crack-like flaws were present within the wear scar, a wear call (WAR) was assigned to the Plus Point report.
- 4) Plus Point indications reported as "I-codes" (i.e., SAI, SCI, MAI or MCI) were either (a) removed from service via plugging, or (b) left in service if the indications qualified under the requirements of GL 95-05.
- 5) All hot leg top of tubesheet circumferential indications were stabilized prior to plug installation.

**e) Number of tubes plugged or repaired during the inspection outage for each active degradation mechanism:**

The following tables list the number of tubes plugged for each existing degradation mechanism found during 2R17. This is the second consecutive outage where the alternate repair criteria of GL 95-05 was implemented. No sleeves were installed during 2R17.

For the following Tables:

The Hot Leg Sludge Pile column includes indications located above the top-of-tubesheet.

The Hot Leg Expansion Transition (Exp Trans) column includes indications located (a) at the secondary side face of the tubesheet, (b) at the expansion transition or (c) within the tubesheet.

2RCS-SG21A					
Degradation Mode	Hot Leg Sludge Pile	Hot Leg Exp Trans	AVB	Tubesheet Sleeves	Total Indications
Axial ODSCC	3	1			4
Circ ODSCC	1	18			19
Wear			1		1
Volumetric				2 (1)	2
Total	4	19	1	2	26

Notes for 2RCS-SG21A (26 indications in 26 tubes):

- 1) Two tubesheet sleeves were removed from service for having volumetric indications reported at approximately 2.0" above the TTS. Scrutiny of the indications could not definitively determine if the indications were located on the tube ID or sleeve OD however it was the best judgment of the analyst that the indications were located on the tube ID surface. As a precautionary measure these two locations were removed from service by plugging. The parent tube between the sleeve joints is not considered part of the pressure boundary.

2RCS-SG21B					
Degradation Mode	Hot Leg Exp Trans	AVB	Hot Leg TSP	Free Span Ding	Total Indications
Axial ODSCC	1 (1)		1 (2)	1 (3)	2
Axial PWSCC	1 (1)				1
Circ. ODSCC	6				6
Wear		2			2
Total	7	2	1	1	11

Notes for 2RCS-SG21B: (12 indications in 11 tubes)

- 1) One tube contained an axial ODSCC and an axial PWSCC indication at the top-of-tubesheet.
- 2) One sleeved tube was removed from service for having a DSI reported at the 5<sup>th</sup> H/L TSP from a 0.630" diameter bobbin probe.
- 3) R25 C45 was in-situ pressure tested (SAI reported at AVB1 +3.68") and successfully passed.

2RCS-SG21C					
Degradation Mode	Hot Leg Sludge Pile	Hot Leg Exp Trans	Hot Leg TSP	Free Span Ding	Total Indications
Axial ODSCC	2	1	2		5
Circ. ODSCC		10			10
Total	2	11	2 (1)		15

Notes for 2RCS-SG21C (15 indications in 15 tubes):

- 1) Two tubes were removed for metallurgical analysis per GL 95-05.

**f) Total number and percentage of tubes plugged or repaired to date:**

The total number of tubes plugged as of the end of 2R17 is 785 tubes (7.751%). The equivalent plugging level due to Alloy 800 sleeves (installed in 2R16) is 789 tubes (7.790%).

**g) The results of condition monitoring, including the results of tube pulls and in-situ testing:**

All tubes were shown to satisfy the structural and leakage integrity performance criteria at 2R17. The relative severity levels of the degradation observed during 2R17 were judged to be consistent with or bounded by the levels associated with previous outage inspection results. Based on the indications observed during 2R17, the SG tubing is expected to meet all operational structural and leakage integrity requirements at End-Of-Cycle 18. None of the indications reported during 2R17 represented a leakage potential at postulated main steam line break conditions.

Two tubes (4 TSP intersections) were removed from the SG in support of GL 95-05. The preliminary metallurgical lab results were submitted to the NRC via FENOC Letter L-14-241, Enclosure C, and dated 08/11/14

During the 2R17 steam generator tube inspection, one indication (SG B: R25 C45; SAI at AVB1 +3.68") exceeded the structural integrity limits for axial degradation (i.e., burst integrity  $\geq$  3 times normal operating primary-to-secondary pressure differential across SG tubes) based on the calculation of burst pressure of the observed eddy current parameters. This tube was in situ pressure tested in a full tube mode to 5000 psi with no leakage or burst detected. All other eddy current indications satisfied the structural and leakage integrity performance criteria according to the guidance of the Steam Generator Integrity Assessment Guidelines: Revision 3.

**h) The effective plugging percentage for all plugging and tube repairs in each SG:**

The following table lists the plugging percentages and the effective plugging percentage due to sleeving for each steam generator as of the end of 2R17.

SG	Tubes Plugged 2R17	Total Tubes Plugged	% Plugged	Sleeves Installed	Plug Equivalency	% Effective Plugging
2RCS-SG21A	26	286	8.472	53	288	8.531
2RCS-SG21B	11	277	8.205	19	278	8.235
2RCS-SG21C	15	222	6.576	22	223	6.605
TOTAL or AVG	52	785	7.751	94 (1)	789	7.790

(1) Represents the number of sleeves installed in 2R16 minus the three sleeves plugged 2R17

**i) Repair method utilized and the number of tubes repaired by each repair method:**

No sleeves were installed during 2R17.

## Definitions of Abbreviations, Codes, and Reporting Terminology

### 3 Letter Code Definitions

Term	Bobbin Coil Probe
BLG	Bulge
DNI	Dent/Ding with a Possible Indication
DSI	Distorted Tube Support Plate Signal with Possible Indication
DTI	Distorted Tubesheet Signal with Possible Indication
MBM	Manufacturing Burnish Mark
NQI	Non-Quantifiable Indication
OXP	Over Expansion
PCT	Percent Through Wall
PSI	Possible Tube Support Plate Indication (Ligament Breach)
Term	Plus Point Probe
CSI	Confirmed Tube Support Plate Indication (Ligament Breach)
MAI	Multiple Axial Indications
MCI	Multiple Circumferential Indications
SAI	Single Axial Indication
SCI	Single Circumferential Indication
SVI	Single Volumetric Indication
VOL	Volumetric Indication
WAR	Wear

### Additional Definitions

Term	Definition
AVB	Anti-Vibration Bar
DENT	Observed within a Tube Support Plate
DING	Observed in Free-Span Region of the Tubing
EPRI	Electric Power Research Institute
H/L	Hot Leg (Inlet)
NSAL	Nuclear Safety Advisory Letter
ODSCC	Outside Diameter Stress Corrosion Cracking
PLP	Possible Loose Part
PWSCC	Primary Water Stress Corrosion Cracking
TSP	Tube Support Plate
TTS	Top of Tubesheet

## **2R17 Steam Generator Examination Results**

Attachments A, B, and C provide steam generator examination results for tubes in the Beaver Valley Power Station, Unit No. 2, Steam Generator A (2RCS-SG21A), Steam Generator B (2RCS-SG21B), and Steam Generator C (2RCS-SG21C) with service-induced indications.

**NOTE:** The data contained in the Attachments comes from the production analysis process and has not been re-sized or re-profiled for structural integrity concerns (i.e., field reported call is provided). Therefore, variations in the dimensions of a given indication (e.g., length, angular extent, voltage, etc.) may exist between this document and those documents previously submitted to the NRC in support of the spring 2014 outage (2R17).

Refer to the following tables for a description of terms used in these attachments.

### **Description of Column Headings and Data Abbreviations Used in Steam Generator Examination Results**

#### **Report Header Definitions**

<b>Term</b>	<b>Definition</b>
ROW/COL	Row & column designation of tube location
IND	Type of indication
LOC	Location of nearest support structure
INCH	Indication distance from nearest support structure
%TW	Field measured percent through wall of an indication
LENGTH	Field measured length of an indication
ANGLE	Field measured angular extent of an indication around the tube
VOLTS	Field measured voltage amplitude of an indication
PHASE	Field measured angular rotation of an indication
CHAN	Recording channel of an indication
FROM	Starting point of examination
TO	End point of examination

#### **Examination Extent Definitions (FROM - TO)**

<b>Term</b>	<b>Definition</b>
01C	1 <sup>st</sup> Tube Support Plate on Cold Leg Side
01H	1 <sup>st</sup> Tube Support Plate on Hot Leg Side
AVB1	1 <sup>st</sup> Anti-Vibration Bar (Numbered Hot Leg to Cold Leg)
SBH	Bottom of Sleeve - Hot Leg
STH	Top of Sleeve - Hot leg
TEC	Tube End - Cold Leg
TEH	Tube End - Hot Leg
TSC	Cold Leg Tubesheet (Secondary Face)
TSH	Hot Leg Tubesheet (Secondary Face)
