Subject: Update of verbal notification, release on permit 633.
Date: Tuesday, November 04, 2014 9:08:11 AM

This email is to update the verbal notification (voice mail) given to your office on 10-31-14 to the LQD and 11-1-14 to the NRC of a reportable release on Permit 633, NRC Source Material License SUA-1548. The release happened on Thursday, 10-30-14 at approximately 11 pm. The data reported was as follows;

- Location: Wellfield 10, Header House 10-7, Well 10I-336.
- Fluid release estimated at 15 gallons of injection fluid onto the ground surface. Cameco determined the fluid did enter waters of the state, a dry draw. A sample for uranium content showed 2.1 ppm.
- Cause: O-Ring failure. Fluid valves were closed to stop the release. O-ring was replaced and well was put back into service.

A report will be filed with the WQD spill database.

A written notification will be sent out on or before Friday November 7, 2014.

Please reply or call if more information is needed.
