Gentlemen:

INADEQUATE CORE COOLING
SUPPLEMENTAL INFORMATION
FACILITY OPERATING LICENSES DPR-70 AND DPR-75
SALEM GENERATING STATION UNITS 1 AND 2
DOCKET NO. 50-272 AND 50-311

Via letter dated February 23, 1990 (NLR-N90013), Public Service Electric & Gas (PSE&G) proposed revisions to the Salem Technical Specification requirements for Subcooling Margin Monitor and Reactor Vessel Level Instrumentation System. As discussed with Mr. J. C. Stone, Licensing Project Manager, the marked up pages of the submittal require minor revisions.

For Salem Units 1 and 2, on Table 3.3-11, two typographical errors on items not affected by the proposed revisions were identified and corrected.

In addition, the following administrative changes were made:

1. For Salem Units 1 and 2, Table 3.3-11, footnote **, the word "OPERABLE" was changed to full caps.
2. For Salem Unit 2, Table 3.3-11, Action 4, a typographical error for the word "OPERABLE" was corrected.

The corrected marked up pages are included as Attachments 1 and 2. PSE&G's significant hazards analysis as presented in the February 23, 1990 letter is not affected.
