Subject: RE: Quad Cities ISI Inspection - January 11, 2019 RFI Part B

Tom

Ramon indicated he would be able to send me current outage schedule for ISI exams and welding activities tonight.

For ISI, I am planning to observe one sample in each type of ISI examination specified in IP 71111.08: volumetric (UT), surface (likely MT), General Visual/VT-3 of Containment – IWE, and visual (VT-3) of a pipe support.

Since changes to outage schedule for ISI exams are anticipated, it may be better to coordinate ISI samples to observe in plant the day prior to the exam. I will request and review associated WO and supporting ISI procedures the day before in preparation. Also, I intend to be in the pre-job briefing, and observe instrument calibrations, both prior to and after ISI exams.

January 11, 2019 RFI Part B - Document Request Available On-site Monday March 18, 2019

Completed welding records since beginning of prior outage:

- WO 01623483-01; Core Spray Keep Fill line 1-1432-2" support weld repair
- WO 01801722-01; Install new hardened vent piping per EC 392257
- WO 01838472-13; Machine component 1-0203-3A inlet flange

Corrective action records related to ISI, FME, and Reactor Vessel Internals
