LILCO's Response To NRC Bulletin 89-02
Shoreham Nuclear Power Station - Unit 1
Docket No. 50-322

Gentlemen:

This letter is written to comply with the reporting requirements of the subject bulletin. LILCO hereby reports that safety-related swing check valves 2 inches in size or greater were reviewed for applicability to the information provided in NRC Bulletin 89-02. It was determined that no Anchor Darling Model S350W swing check valves or valves of similar design exist in the plant and, by design, no ASTM A-193 Grade B6 type 410SS internal bolting material exists in any safety-related swing check valve in the plant. This determination was reached after a thorough review of the SNPS check valve data base which includes every safety-related check valve in the plant 2 inches in size and greater. The construction of valves less than 2 inches in size precludes the problems and concerns addressed by the subject bulletin. Thus, the action requirements (disassembly and inspection) of the bulletin are not applicable to SNPS.

Should you have any questions or desire additional information concerning this response, please do not hesitate to call my office.

Very truly yours,

W. E. Steiger, Jr.
Assistant Vice President
Nuclear Operations
