Plant E. I. Hatch
Docket No. 50-366
October 17, 1980

HPCI INJECTION INTO REACTOR

On 10-9-80 at approximately 0405, following a reactor scram on low reactor water level due to loss of feedwater, HPCI auto initiated on low reactor water level and injected into the reactor. HPCI tripped on high reactor water level. HPCI was manually started and injected twice more for reactor water makeup due to reactor being isolated causing loss of RFP's.

As of the date of this report, there have been sixteen (16) HPCI injections into the reactor vessel.
