RESPONSES TO STAMIRIS' DISCOVERY REQUESTS  
PURSUANT TO BOARD ORDER OF MAY 8, 1981

Pursuant to the Order of the ASLB dated May 8, 1981, Consumers Power Company hereby provides the following responses to interrogatories of Barbara Stamiris:

Questions 5(b) - 5(e) (January 26, 1981 Request)

5(b) On what basis was the decision to remove and replace the faulty fill under the administration building made?

The basis for the decision was the status of building construction in this area at the time the problem was discovered. No construction above the grade beam and footings had been completed. The most economical approach was to remove and replace the grade beam and the supporting fill.

5(c) Who made this 5(b) decision?

The decision was made by the Bechtel Project Superintendent. (Joel Newgen)

5(d) When was this (5b) decision made?

The decision was made in September, 1977.

5(e) Describe and explain any alternative corrective actions ever considered and rejected for the Administration Building, if such considerations were made.

No alternative corrective actions were considered.

Question 13 (April 27, 1981 Request

Response

During the period of December 6, 1979 through April 30, 1980, concrete work on the Diesel Generator Building included placement of the following: removable roof plugs for bays 2, 3 and 4, mud mats and base slabs for the stairtowers and north entries, stairs and slabs for the north entryways and the parapet wall for the west stairtower.

Dates for the concrete pours were as follows:

December 6, 1979 - removable roof plug bay 2

December 10, 1979 - removable roof plug bays 3 and 4

January 30, 1980 - mud mats for stairtowers

February 13, 1980 - base slabs for stairtowers

February 13, 1980 - mud mats, north entries bays 2 and 3

February 26, 1980 - stairs and slabs for all north entryways

February 26, 1980 - parapet wall for west stairtower

No work was performed by way of excavation or sealing of cracks during this period.

The "grade slabs" mentioned (in Applicant's Response dated March 30, 1981) refer to the concrete slabs at elevation 634'-6" in all four bays of the building. Concrete work on these slabs includes mud mats, structural slabs, and underlying ductbanks. The curbs referenced are the pads for motor control centers in all four bays.

The NRC was advised of Applicant's intent to resume construction on the diesel generator building in MCAR 24, Interim Report #7, p. 14, attached to a letter from Stephen Howell to James Kappler dated September 5, 1979,

and in MCAR 24, Interim Report #8, p. 3, attached to a letter from Howell to Keppler dated November 2, 1979. In addition, the NRC had a full time inspector assigned to the Midland site during the time period in question.

No work related directly or indirectly to soils or soil settlement was performed during the time period in question.
