Docket #50-321
December 18, 1980

INOPERABLE SPRINKLER SYSTEM

On 12-13-80, at 2400 hours, the sprinkler system providing protection for the Unit 1 reactor building HVAC room had been inoperative for a period of 14 days. This system was isolated in order to implement design modifications that will bring the system into NFPA code compliance and will provide corrective action for NRC I&E open item 50-321/80-02-02.

Modification work and system functional test are expected to be complete by 1-1-81.
