SUBJECT: James A. FitzPatrick Nuclear Power Plant
Docket No. 50-333
**Proposed Changes to the Technical Specifications Regarding
Pressure-Temperature Limits (JPTS-89-024)**

REFERENCES: 1. NYPA letter J. C. Brons to NRC (JPN-89-044), dated June 30,
1989, responding to Generic Letter 88-11.

Dear Sir:

This application for an amendment to the James A. FitzPatrick Technical Specifications revises Specification 3.6.A, "Pressurization and Thermal Limits," to comply with Generic Letter 88-11 and Regulatory Guide 1.99, Revision 2. Specifically, the existing pressure-temperature curves in Figure 3.6-1 are replaced with new curves for operation to 12, 14, and 16 Effective Full Power Years (EFPY). The Limiting Condition for Operation and the Bases Section are revised to reflect the new pressure-temperature limits.

As committed in Reference 1, the Authority intends to implement these changes before startup following the March 1990 refueling outage. Approval by April 30, 1990 is requested to support the planned restart date.

Enclosed for filing is the signed original of a document entitled "Application for Amendment to Operating License," with Attachments I and II thereto, comprising a statement of the proposed changes to the Technical Specifications and the associated Safety Evaluation.

In accordance with 10 CFR 50.91, a copy of this application and the associated attachments are being provided to the designated New York State official.
