Fitness For Duty Program

The data generated under the Fitness For Duty program from January 1993 through June 1993 has been reviewed and analyzed and no weaknesses have been identified.

The random pool contains not only those badged for unescorted access, but also those employees who may, in an emergency condition, be called upon to work at the site and may require unescorted access. Contractors without approved programs are included in the pool while on site. Testing is performed on a nominal weekly basis to include swing shifts, weekends and holidays at a rate which will equal 100% yearly of the total population.

In summarizing management actions associated with the Fitness For Duty program, it should be emphasized that the incidences of confirming positive tests have been low. Consequently, management actions relative to determination of fitness for duty have been limited. Contractor employees screened as positive are denied access and no further action is taken.

There were no management actions taken on licensee employees during this six month period.
