Docket No. 50-364

U. S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, D. C. 20555

Gentlemen:

Joseph M. Farley Nuclear Plant - Unit 2  
Updated Inservice Inspection Program  
for ASME Code Class 1, 2 and 3 Components

Revision 0 of the Unit 2 updated Inservice Inspection (ISI) Program was submitted to the NRC by letter dated December 16, 1988. The NRC granted interim approval of certain reliefs by letter dated March 31, 1989. As discussed in letters dated February 8 and March 23, 1989, approval of the remaining relief requests was deferred. Alabama Power Company proposed a schedule for approval of the remaining reliefs by letter dated June 8, 1989.

By letter dated August 3, 1989, the NRC requested that Alabama Power Company provide additional information pertaining to the review of the ISI Program. Alabama Power Company responded to the NRC's Request for Additional Information (RAI), by letters dated October 5 and December 7, 1989 and April 12, 1990.

The RAI responses contained commitments to revise the ISI Program including the modification or deletion of certain relief requests. Revision 1 of the ISI Program is herewith submitted to incorporate these changes.

11

It is requested that the NRC's review of the ISI Program including this latest revision be completed and SER issued with granting of relief requests by September 28, 1990. Granting the remaining relief requests in accordance with this proposed schedule will provide approximately one year (not including the Code allowed one-year extension) for Alabama Power Company to complete the required examinations. This will also permit proper planning of examinations to be performed during the remaining refueling outage tentatively scheduled to begin October 12, 1990.

If there are any questions or if additional information is needed, please advise.

Respectfully submitted,

ALABAMA POWER COMPANY

W. G. Hairston, III
