EXECUTIVE SUMMARY

FARLEY NUCLEAR PLANT

NRC Inspection Report Nos. 50-348/99-09 and 50-364/99-09

This routine, announced inspection was conducted in the area of plant support by a regional Safeguards Inspector and select personnel from the Office of Nuclear Reactor Regulation. The specific area evaluated was the Physical Security Program for Power Reactors.

- The licensee's access control equipment, perimeter intrusion detection system, and closed circuit television camera assessment met the requirements outlined in the Physical Security Plan.
- An apparent violation of the Physical Security Plan was identified in that during two force-on-force security drills conducted March 9, 1999, the licensee failed to properly intercept and engage a mock adversary force attempting to reach vital equipment.
