Subject: [External_Sender] RE: Nest on Canal Bank

Hi Audra,

I just left a voicemail but IRG did discover a green turtle nest along the intake canal bank this morning at 7:00AM. It was successfully relocated to the beach and there were 130 eggs in the clutch. IRG will continue to monitor the nest. Please let me know if you have any questions.

Thanks,

Kristin

Subject: FW: Nest on Canal Bank

Hi Audra,

As a follow-up to my voicemail, two loggerhead nests were found this holiday weekend (Saturday and Monday) during routine monitoring of the intake canal bank. Both nests were successfully relocated to the beach near the discharge canal (where the beach is significantly wider). Details on both nests below:

5/27/23 at 6:32 AM
71 eggs in the clutch

5/29/23 at 7:50 AM
105 eggs in the clutch

It's been a very active season and Inwater Research Group continues to remove turtles as quickly as possible. Just for reference, as of Saturday, 160 turtles were removed in the month of May. This included 44 adult loggerheads, 41 adult greens, and one adult leatherback. Roughly 20 loggerheads between 80-85cm (which are not technically adults but are most likely nesting females) have also been removed.

Let me know if you have any follow-up questions.

Jodie

Subject: Nest on Canal Bank

Hi Audra,

Following up on the voicemail I left. A loggerhead nest was found Sunday morning during routine monitoring on the intake canal bank. The nest was successfully relocated to the beach. Since the nest was discovered, 3 healthy adults have been removed from the canal. There is one adult and one sub-adult currently in the canal that they will be working to capture and remove. Please let me know if you need anything else.

Thanks,

Kristin (Peekstok) Eaton
