

**OFFICE OF NUCLEAR MATERIALS SAFETY AND SAFEGUARDS
PROGRAM CODE DESCRIPTIONS AND INSPECTION PRIORITIES**

September 2023

Program Codes Used in Materials and Fuel Licensing and Inspection Programs

A five-digit program code number is assigned by Nuclear Regulatory Commission (NRC) to each license to designate the major activity or principal use authorized in the license. Table 1 contains a listing of the program codes used in this document. The regulations applicable to the various activities and uses of byproduct, source, and special nuclear materials are contained in Title 10 of the *Code of Federal Regulations* (CFR) Parts 30, 40, and 70. A basic understanding of these regulations is a necessary prerequisite to the proper assignment of a program code to a specific activity or use. The NRC uses approximately 200 program codes to classify the thousands of active licenses. (See Table 2 for general information on license numbers.) Some of these program codes used for defining authorized uses narrowly define an activity, such as radiography, while other program codes are more extensive in scope. More than one code may apply to a given license; however, the primary code denotes the licensee's principal use of material or the licensed activity with the highest inspection frequency. One or more secondary codes may be used to indicate other significant uses. The most current program codes are available in the Materials Licensees Toolkits Index, at <https://www.nrc.gov/materials/miau/mat-toolkits.html>.

BROAD SCOPE licenses are issued to large facilities having a more comprehensive radiological protection program. These licenses authorize possession of a wide variety of radioactive materials without having each radionuclide and authorization listed on the license. There are three types of broad licenses: Type A, Type B, and Type C. It should be noted that broad licensees can be authorized to use up to 100,000 curies in sealed sources for irradiation of materials (see 10 CFR 33.17). Most broad licenses are Type A. (For a clear understanding of these three types, see 10 CFR Part 33.)

Broad-Type A licenses are issued under 10 CFR 33.13 and typically authorize possession of any byproduct material with an atomic number between 1 and 83, in any chemical or physical form. The maximum possession limit is usually specified both for the individual radionuclide and for the total activity of all radionuclides. These licensees must have a Radiological Safety Officer and a committee that acts in the place of NRC to make day-to-day decisions about the program.

Broad-Type B licenses are issued under 10 CFR 33.14 and authorize possession of a variety of radionuclides. The maximum possession limit is specified in 10 CFR 33.100, Schedule A, Column I. Broad-Type B licensees must have a Radiological Safety Officer and adequate administrative controls.

Broad-Type C licenses are issued under 10 CFR 33.15 and authorize possession of a variety of radionuclides. The maximum possession limit is specified in 10 CFR 33.100, Schedule A, Column II. Broad-Type C licensees must have training and experience as specified in the regulations, and the licensee must have adequate administrative controls.

MULTI-SITE license authorizes an organization to use licensed materials for the specific authorized uses in Item 9. At the licensee's locations and/or facilities throughout NRC's jurisdiction.

OTHER (LIMITED SCOPE) licenses are usually issued to smaller organizations requiring a more restrictive license. These licenses are usually more specific in identifying each radionuclide, the chemical and physical form, and the authorized activities and users.

Materials licensing and inspection fee categories are described in 10 CFR 170 and 171. Multiple fee categories may apply for different activities performed under a single license. The Omnibus Budget Reconciliation Act of 1990, as amended, requires that the NRC recover 100 percent of its budget authority, less appropriations from the Nuclear Waste Fund, by assessing license and annual fees. The fee categories listed in the following pages are a guide to which are most likely to occur for the program code. To determine if a fee exemption may apply, one must refer to 10 CFR 170.11 and 171.11. The Office of the Chief Financial Officer (OCFO) determines fee categories and fee exemption requests on a case-by-case basis, using the licensed material and the authorized use description included in the license. Questions regarding fee issues must be referred to the OCFO.

The fuel cycle facility inspection program is described in NRC Inspection Manual, Chapter 2600 (IMC 2600). The inspection frequency for the various procedures at these facilities is described in Table 1 of IMC 2600.

Inspection frequencies, also known as priorities for materials licenses are described in detail in NRC Inspection Manual Chapter 2800 (IMC 2800) and noted at the end of each program code description on this list.

Inspections are generally conducted as follows:

Initial inspections of all licenses shall be completed within 12 months of issuance of the license, as instructed in IMC 2800, Section 05.03. The instructions address the WBL entries that are necessary to complete this action. New licenses that are exempted from an initial inspection are also addressed.

Routine periodic inspections are normally conducted at intervals in years corresponding to the inspection priority for that category:

Priority 1	yearly,
Priority 2	every 2 years,
Priority 3	every 3 years,
Priority 4	every 4 years,
Priority 5	every 5 years,
Priority 1/0	Multiple inspections are conducted in a year. The inspection frequency for the various procedures at these facilities is described in Table 1 of IMC 2600,
Priority 5R	remote contact may be considered, every 5 years,
Priority D	decommissioning inspection determined under IMC 2602, and,
Priority W	construction inspection for walk-in or pool type irradiators under IMC 2815.

Program Code	Description	Fee Category	Inspection Priority
01100	ACADEMIC TYPE A BROAD, 1-5 LOCATIONS	3L	3
01110	ACADEMIC TYPE B BROAD, 1-5 LOCATIONS	3L	5

Table 2

Part 30 Licenses

A Part 30 and 40.52 license number has the following format: xx-xxxxx-xx.

The first two digits are the State code. The middle five digits are the institutional code assigned by the Licensing Assistant (LA), which is the same for each license for each physical location. The last two digits are an identification number. There will be a different identification number for each license held by the same institution.

In addition, a license suffix follows certain license types.

License Suffixes

xx-xxxxx-xxG	General (Distribution)
xx-xxxxx-xxE	Exempt (Distribution)
xx-xxxxx-xxMD	Medical Distribution

Part 40 Licenses (Exclude 40.52)

The license number for a Part 40 license is composed of three letters followed by a number.

The first letter is always 'S.'

The second letter can be U, T, or M:

- U-Uranium Only
- T-Thorium Only
- M-Both Uranium and Thorium

The third letter can be A, C, D, E, or B:

- A-Manufacture/Possession of Ore
- C-Storage Only
- D-Sub-Critical Assembly
- E-Export
- B-Everything Else

The identification number that follows the three-letter code is assigned chronologically by Headquarters, NMSS/MSST/MSLB.

For example, SMC-xxx is a Part 40 license that covers both uranium and thorium storage.

Part 70 Licenses

All Part 70 licenses are composed of the same three-letter code, "SNM," followed by an identification number, which is assigned chronologically by Headquarters, NMSS/MSST/MSLB.

BYPRODUCT MATERIAL PROGRAM CODES

Academic Broad licenses are issued to educational institutions for the possession and use of radionuclides for teaching, training, and some research purposes, such as carbon-14 dating, equipment calibration, tracer studies, and the identification of substances in compounds. Examples of the program codes are 01100, 01110.

A medical institution is defined in 10 CFR 35.2 to be an organization in which several medical disciplines are practiced. It typically provides 24-hour-per-day medical, surgical, or psychiatric treatment; nursing, food, lodging, etc., to ill or injured patients. Medical Institution Broad and Medical Institution Limited licenses are issued to organizations for the application of byproduct material, or its radiation, to humans. Radioactive material administered to patients is considered to be an in vivo procedure. (Use of radioactive material in test tubes in the laboratory is considered to be an in vitro procedure, and these licensees are in program code 02410.) Licensees authorized to use therapeutic 10 CFR 35.1000 medical uses listed in program code 02240, high dose rates (HDRs), teletherapy, and gamma knives are generally issued program codes 2240, 02230, 02300, and 02310, as applicable, along with the program code for their medical institution license (e.g., 02110 or 02120). Examples of the program codes are 02110, 02120.

Medical Private Practice licenses are issued, pursuant to 10 CFR 35.12, to a physician or physicians for the possession and use of radionuclides in well-established diagnostic and therapeutic procedures, usually in their offices outside a medical institution. Private practice licensees authorized for therapeutic medical uses under 10 CFR 35.1000 listed in program code 02240, HDRs, teletherapy, or gamma knives are issued program codes 02240, 02230, 02300, and 02310, as applicable, along with the program code for their private practice license (e.g., 02200). These codes authorize the possession and use of a wide range of radionuclides in byproduct, source and special nuclear material. Examples of the program codes are 02200, 02201.

Well logging licenses are issued to firms for the possession and use of radionuclides for subsurface surveying to obtain geological information. These testing procedures are primarily used in oil, gas, and mineral exploration to identify subsurface geologic formations. Examples of the program codes are 03110, 03111.

Measuring System licenses are issued for the possession and use of measuring devices such as gauges and gas chromatographs containing radionuclides. Frequently, the equipment is serviced, and leak tested by the manufacturer or lessor of the equipment. Examples of the program codes are 03120, 03121.

“Byproduct material” refers to radionuclides that may be produced in a reactor, increasing the production of fission products or producing activation products from other isotopes. With the Energy Policy Act of 2005, “byproduct material” also includes radionuclides for medical, commercial, and research uses produced by accelerators, and discrete sources of radium. NRC regulates both reactor and facilities that meet the 10 CFR 50.2 definition of a production facility under 10 CFR Part 50. These licensees have 10 CFR Part 50 authorizations for byproduct material uses incidental to the reactor license. If the reactor or production facility licensee produces quantities of byproduct material for transfer to other licensees for distribution to 10 CFR Part 30 licensees (which includes 10 CFR Parts 32, 33, 34, 35, 36, and 39 licensees), the licensee will be identified as a byproduct radionuclide producer. NRC does not

regulate the accelerator used to produce byproduct material but does regulate the byproduct material produced.

Manufacturing and Distribution Broad, and Manufacturing and Distribution Other licenses are issued for the manufacture and distribution of products containing byproduct, source, or special nuclear material in various forms for a number of diverse purposes. The products are distributed usually to persons specifically licensed by the NRC or an Agreement State. Licensees include medical suppliers that process, package, and distribute products such as diagnostic test kits, radioactive surgical implants, and tagged radiochemicals for use in medical, academic and industrial research, and for diagnosis and therapy. Licensees are also suppliers who, after purchasing bulk quantities of byproduct material, process, encapsulate, package, and distribute these sealed sources for use in gamma radiography, cobalt irradiation, well logging, etc. Major products include gamma radiography sources, cobalt irradiation sources, well logging sources, sources for gauges and smoke detectors, and radiochemicals for nonmedical research. Firms are also involved with the manufacture, assembly, and distribution of various other products that contain radionuclides. The broad licenses are issued to the larger facilities having more comprehensive radiological protection programs. Distribution of products to customers that require a specific license for their possession is authorized under these licenses. However, distribution to persons who will possess them under a general license is authorized under a separate license with a "G" suffix, and distribution to persons who are exempt from the requirement of a license is authorized under a separate license with an "E" suffix.

The Energy Policy Act of 2005 amended the definition of byproduct material to include discrete sources of radium-226 made before and after the date of the Energy Policy Act. Therefore, manufacturing and distribution licenses now include the assembly, disassembly, and repair of products containing radium-226, in addition to the manufacture of products containing discrete sources of radium-226. Examples of the program codes are 03210, 03211.

Waste disposal service licenses authorize the collection, transportation, and storage of radioactive wastes containing byproduct, source, and/or special nuclear material. These licenses authorize firms to collect packaged waste material, transport the waste, and temporarily store it before transporting the waste to an authorized burial ground. Some licenses authorize the opening of packages and treatment of the waste to reduce the volume (e.g., compaction). Examples of the codes are 03231, 03232.

General License Distribution licenses are issued for the distribution of byproduct material, source, or special nuclear material, usually sealed sources in devices, to general licensees. Examples of such items are: (i) gauges, (ii) luminous aircraft safety devices, (iii) calibration and reference sources, (iv) ice detection devices, and (v) in vitro test kits. The requirements for a license for distribution to general licensees are specified in various sections of 10 CFR Part 32, Part 40 or Part 79, as applicable. A general licensee does not need to submit a formal application and does not receive a formal license. The conditions of a general license are contained in 10 CFR Part 31, Part 40 and Part 70. These licenses generally do not authorize possession/use and have a "G" suffix. Examples of the program codes are 03240, 03241.

Exempt Distribution licenses are issued for the commercial distribution of byproduct or source material to persons who are exempt from the licensing requirements. These exemptions and their limitations, if any, are contained in 10 CFR Parts 30.14-30.22, and 40.13 inclusive. Examples of exempt items are watches, electron tubes, and smoke detectors. The requirements for a license to distribute byproduct material to persons exempt from licensing are

contained in 10 CFR Part 32 and Part 40. These licenses generally do not authorize possession and have an “E” suffix. Examples of the program codes are 03250, 03251.

Industrial Radiography licenses are issued for the possession and use of sealed radioactive materials, usually in exposure devices or “cameras,” that emit gamma rays for nondestructive examination of pipelines, weld joints, steel structures, boilers, aircraft, ship parts, and other high-stress alloy parts. The radioisotopes most commonly used are cobalt-60 and iridium-192. Radiography can be conducted either in a permanent facility or at a temporary jobsite. The program codes are 03310, 03320.

Irradiator licenses are issued for the possession and use of high-activity sealed sources of radioactive material in an irradiator constructed so that the sealed sources and the material being irradiated are contained in a shielded volume. Primary uses include nonhuman medical and nonmedical research conducted chiefly by universities, and industrial uses, such as the sterilization of medical products and drugs, and treating of hardwoods, plastics, and semiconductor materials. The radioisotopes most commonly used in these irradiators are cobalt-60 and cesium-137. Self-shielded units are designed so that the operator cannot inadvertently place any part of his/her body in the path of the beam. Units other than self-shielded units may rely on facility alarms and interlocks to prevent accidental exposure to radiation. “Irradiators Other” include units where the source is stored and/or used under water. Examples of the program codes are 03510, 03511.

Research and Development licenses are issued to private organizations, universities, and government agencies for the possession and use of radionuclides in research. Typical uses include irradiation of materials, tracers and catalysts in chemical reactions, measurement using industrial gauges, and the identification of substances in compounds. In private industry, uses are primarily in product development. In academic institutions, research and development includes training of students in the use of radioactive materials. Broad licenses are issued to larger facilities having a more comprehensive radiation protection program where the types of research being conducted may fluctuate rapidly. Typical activities include environmental analysis, food quality studies, aerospace and engineering applications, and product development. Examples of the program codes are 03610, 03611.

Source materials are materials essential to the production of special nuclear materials. Source material includes (i) uranium (and depleted uranium produced as enrichment tails) or thorium, or any combination thereof, in any physical or chemical form; or (ii) ores that contain by weight 0.05 percent or more of uranium, thorium, or any combination thereof. (See 10 CFR 40.4 for a definition of source material.)

Source Material licenses are issued for the possession and use of refined uranium and/or thorium for fabrication, research, and manufacture of consumer products such as ceramics and glassware; manufacture of refractories; uranium shielding; analytical standards; and other uses not specifically classified. A smaller number of these licenses are issued to allow the possession of uranium and/or thorium for other uses such as distribution and storage. An even smaller number of these licenses are issued to allow the use of uranium in subcritical assemblies. Priority sections denoted as 1/0 indicate that inspections are performed at least annually. Examples of the program codes are 11100, 11200.

Special nuclear materials include plutonium, uranium-233, uranium enriched in the isotopes of uranium-233 or uranium-235, and any material artificially enriched in any of these materials. (See 10 CFR 40.4 and 70.4 for a definition of special nuclear material.) Priority sections

denoted as “1/0” indicate that inspections are performed at least annually. Examples of the program codes are 21130, 21133.

Pacemaker-Byproduct Material and/or Special Nuclear Material licenses are issued to: (1) medical facilities for the surgical implantation of pacemakers that are powered by a device containing byproduct or special nuclear material; (2) manufacturers and distributors for the distribution of these pacemakers; and (3) individuals, most often Canadian citizens on holiday, with implanted nuclear pacemakers, who are visiting the United States. Examples of the program codes are 22160, 22161.

The primary and secondary program codes should be selected that describe the licensed activities. The primary program code is the program code with the inspection priority that is most frequent. All other program codes assigned are considered secondary program codes.

Academic Broad - Type A, 1-5 Locations

Program Code 01100

Academic Broad - Type A 6-20 Locations

Program Code 04618

Academic Broad - Type A More Than 20 Locations

Program Code 04619

Academic Broad-Type A licenses are issued to larger institutions where there is a diversity in the use of various radionuclides. The kinds and uses of radionuclides may change frequently, even within the same institution. Quantities are usually in the multicurie range. The “Authorized Use” condition on these licenses may permit teaching and training of students; research and development (as defined in 10 CFR 30.4); or laboratory research, including animal studies. If the “Authorized Use” includes medical research, diagnosis, and/or therapy, the license should be listed under an appropriate Part 35 medical use program code and may also authorize laboratory research with an appropriate academic or research program code as a secondary code. (NUREG–1556, Volume 9 or 11 for further explanation.)

This category also includes the possession and use of source material for shielding when authorized on the same license.

10 CFR Citation: Section 33.13

Inspection Priority: 3

Fee Category: 3L, 3L(1), 3L(2)

10 CFR 170.31 License Fee (exemption in 170.11 may apply)

10 CFR 171.16 Annual Fee (exemption in 171.11 may apply)

Academic Broad - Type B, 1-5 Locations

Program Code 01110

Academic Broad - Type B 6-20 Locations

Program Code 04620

Academic Broad - Type B More Than 20 Locations

Program Code 04621

Academic Broad-Type B licenses are issued for the possession and use of the radionuclides listed in 10 CFR 33.100, Schedule A, Column I. and constrained by the unity rule (see 10 CFR 33.11).

10 CFR Citation: Section 33.14
Fee Category: 3L, 3L(1), 3L(2)
10 CFR 170.31 License Fee (exemption in 170.11 may apply)
10 CFR 171.11 Annual Fee (exemption in 171.11 may apply)

Inspection Priority: 5

Academic Broad - Type C, 1-5 Locations

Program Code 01120

Academic Broad - Type C 6-20 Locations

Program Code 04622

Academic Broad - Type C More Than 20 Locations

Program Code 04623

Academic Broad-Type C licenses are issued for the possession and use of the radionuclides listed in 10 CFR 33.100, Schedule A, Column II, and constrained by the unity rule (see 10 CFR 33.11)

10 CFR Citation: Section 33.14
Fee Category: 3L, 3L(1), 3L(2)
10 CFR 170.31 License Fee (exemption in 170.11 may apply)
10 CFR 171.11 Annual Fee (exemption in 171.11 may apply)

Inspection Priority: 5

Medical Institution Broad, 1-5 Locations

Program Code 02110

Medical Institution Broad 6-20 Locations

Program Code 04710

Medical Institution Broad More Than 20 Locations

Program Code 04711

Medical Institution Broad licenses are issued to larger medical institutions for the possession and use of a wide range of radionuclides in byproduct, source and special nuclear material in medical research, diagnosis, and therapy. These licensees have Radiation Safety Committees, and these committees are allowed to authorize their own users.

These codes also include the possession and use of source material for shielding when authorized on the same license.

Some medical institutions authorize routine clinical procedures using the 10 CFR 35.100, 35.200, 35.300, 35.400, 35.500, and 35.600 medical use licensing authorizations and include a Broad-Type A, Broad-Type B or Broad-Type C authorization for research. These licenses are not assigned the 02110/04710/04711 program code but should be assigned program code 02120 for the primary code and the applicable academic or R & D program code, as the secondary code. Refer to program code 01100 for R&D use under 30.4.

10 CFR Citation: Sections 33.13-15 and Part 35
Fee Category: 7B, 7B(1), 7B(2)
10 CFR 170.31 License Fee

Inspection Priority: 2

Medical Institution–Written Directive Required, 1-5 Locations Program Code 02120

Medical Institution Written Directive Required 6-20 Locations Program Code 04810

Medical Institution Written Directive Required More Than 20 Locations Program Code 04811

Medical Institution–Written Directive Required licenses are issued to medical institutions required to have procedures for administrations requiring a written directive pursuant to 10 CFR 35.41. This applies to licenses that authorize (i) any teletherapy; (ii) any gamma stereotactic radiosurgery; (iii) any brachytherapy; (iv) any oral administration of sodium iodide I-131 in quantities greater than 30 microcuries; (v) any therapeutic administration of a unsealed byproduct material other than sodium iodide I-131; or (vi) therapeutic uses under 10 CFR 35.1000. This code is used as a primary code for limited scope specific medical use licenses having 10 CFR 35.300, 10 CFR 35.400, certain 10 CFR 35.600, or certain therapy 10 CFR 35.1000 authorizations. This code authorizes the possession and use of a wide range of radionuclides in byproduct, source and special nuclear material. The code is used as a secondary code when the license also authorizes high dose rate remote afterloader or gamma stereo tactic radiosurgery units or modalities listed under program code 02240. Additional secondary codes for research and development may also be used (e.g., 03610, 03611, 03612) as appropriate.

This code also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licensees paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

10 CFR Citation: Sections 35.40, 35.300,

Medical Institution–Written Directive Not Required 6-20 Locations Program Code 04812

Medical Institution–Written Directive Not Required More Than 20 Locations Program Code 04813

Medical Institution–Written Directive Not Required licenses are issued to medical institutions not required to have procedures for administrations requiring a written directive in accordance with 10 CFR 35.41 (see program code 02120). This code authorizes the possession and use of a wide range of radionuclides in byproduct, source and special nuclear material. In general, this code should be used as the primary program code only for limited specific medical licenses authorizing 10 CFR 35.100, 35.200, 35.500., and any non-therapeutic 35.1000 medical uses should be assigned 02240 as the primary code. The secondary code for research and development may be used (e.g., 03610, 03611, 03612, 03620 as appropriate) if research and development activities also are performed that are not covered by Part 35.

This code also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licenses paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

Medical Private Practice–Written Directive Required 6-20 Locations

Program Code 04814

Medical Private Practice–Written Directive Required More Than 20 Locations

Program Code 04815

Medical Private Practice–Written Directive Required licenses are issued to a physician or physicians required to have procedures for administrations requiring a written directive pursuant to 10 CFR 35.41. This applies to licenses that authorize (i) any teletherapy, (ii) any gamma stereotactic radiosurgery, (iii) any brachytherapy, (iv) any administration of sodium iodide I-131 in quantities greater than 30 microcuries, (v) any therapeutic administration of a radiopharmaceutical other than sodium iodide I-131, or (vi) therapeutic use in 10 CFR 35.1000. In general, this code should be used as the primary program code only for medical private practice licenses having 10 CFR 35.300, 35.400, certain 35.600, or certain therapy 35.1000 authorizations. This code is used as a secondary code when the license also authorizes HDR remote afterloader or gamma stereo tactic radiosurgery units and modalities listed under program code 02240.

This category also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licenses paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

Mobile Medical Service–Written Directive Not Required 6-20 Locations **Program Code 04820**

Mobile Medical Service–Written Directive Not Required More Than 20 Locations **Program Code 04821**

Mobile Medical Service–Written Directive Not Required licenses are issued to a physician or physicians for the receipt of radioactive material at a central facility and preparation of patient doses to be administered at outlying small hospitals, nursing homes, etc., where clinical studies are conducted. This type of medical use licensee uses only types and quantities of byproduct materials for 10 CFR 35.100, 35.200, 35.500, and diagnostic 35.1000 medical uses that do not require written directives, and patients must be releasable under 10 CFR 35.75. (If a medical institution conducts a mobile nuclear medicine service, in addition to performing routine diagnostic and therapeutic procedures at its own location, the license should be assigned a primary program code of 02120 and a secondary program code of 02220.)

This category also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licensees paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

High Dose Rate Remote Afterloader 6-20 Locations **Program Code 04822**

High Dose Rate Remote Afterloader More Than 20 Locations **Program Code 04823**

High Dose Rate (HDR) Remote Afterloader licenses authorize the use of large activity byproduct material sealed sources, typically 10 curies of iridium-192, for cancer brachytherapy. These sources are connected to a wire and contained in a shielded device that feeds the source into the patient via a catheter. (If a medical institution or private practice performs HDR procedures in addition to performing diagnostic and therapeutic procedures referenced in 10 CFR 35.100, 35.200, 35.300, 35.400, and 35.500, the license should be assigned a primary program code of 02230 and secondary program codes of 02120, 02121, 02200, or 02201.)

This category also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licensees paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

Mobile Medical Service–Written Directive Required, 1-5 Locations **Program Code 02231**

Mobile Medical Service–Written Directive Required **Program Code 04824**
6-20 Locations

Mobile Medical Service–Written Directive Required **Program Code 04825**
More Than 20 Locations

Mobile medical service–Written Directive Required licenses authorize the use of byproduct material for mobile radiopharmaceutical use, mobile manual and remote afterloader brachytherapy use (i.e., for 10 CFR 35.300, 35.400, 35.600, and therapy 35.1000 medical uses) requiring a written directive for patients and human research subjects that can be immediately released in compliance with 10 CFR 35.75. Equipment (including the HDR devices) and byproduct material for these treatments is transported to outlying small hospitals, nursing homes, etc. For the mobile high dose rate remote afterloader licenses, the large activity byproduct material sealed sources, typically 10 curies of iridium-192, are transported to these outlying locations for temporary implant brachytherapy. These sources are connected to a wire and contained in a shielded device that feeds the source into the patient via a catheter. (If a medical institution conducts brachytherapy at outlying locations using a mobile high dose rate remote afterloader, in addition to performing the routine diagnostic and therapeutic procedures referenced in 10 CFR 35.100, 35.200, 35.300, 35.400, 35.500, and 35.1000 at the permanent site, the license should be assigned a primary program code of 02231 and secondary program codes of 02120 or 02121. Program code 02231 is assigned as a secondary code only if the licensee receives a new authorization included in program code 02240.)

This category also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licensees paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

Medical Therapy–Other Emerging Technology, 1-5 Locations **Program Code 02240**

Medical Therapy–Other Emerging Technology **Program Code 04826**
6-20 Locations

Medical Therapy–Other Emerging Technology **Program Code 04827**
More Than 20 Locations

Medical Therapy–Other Emerging Technology licenses are authorized to use byproduct material in specific products that require unique radiation safety programs. Some of these products

include complex radionuclide beta emitting high dose rate remote afterloaders, microsphere sealed sources, liquid brachytherapy sources, and permanent implant low dose rate remote afterloaders. Future products may include new radionuclide drugs and complex radionuclide drug delivery systems. Most of these, but not all of these are the therapeutic uses authorized pursuant to 10 CFR 35.1000 and will include other new high-risk medical technologies that the medical community, the particular licensee, or NRC have not had extensive experience in using or regulating. Some of the radioactive drugs, the devices and sources currently in this program code include (i) TheraSphere and SirSphere Y-90 microsphere sources and delivery systems, (ii) Novoste intravascular brachytherapy (IVB) sources and devices, (iii) GliaSite I-125 liquid brachytherapy sources and radiation treatment systems, (iv) Nucletron Seed Selectron and Nucletron First System, (v) the Lexel Perfexion gamma stereotactic radiosurgery unit, (vi) the Neouista epiRAD, and (vii) NorthStar Radiogenix. This program code will be assigned as the primary program code for new licenses or licenses amended to add the devices and sources described in this program code if the licensees other appropriate program codes have longer inspection frequencies. An existing license should be inspected within 12 months of the issuance of the amendment for a medical therapy modality under 10 CFR 35.1000. The reviewer should complete the actions in Volume 20, Section 4.12.

This category also includes the possession and use of source material for shielding authorized under Part 40 when included on the same license.

Licensees paying fees under 7.C. are not subject to fees under 2.B. for possession and shielding authorized on the same license.

10 CFR 171.16 Annual Fee

Inspection Priority: N/A

Byproduct Radionuclide Production Using an Accelerator **Program Code 03210**

Byproduct Radionuclide Production Using an Accelerator licenses are issued to facilities that have accelerators used for the production of byproduct material. The license covers activities that take place once radioactive materials are produced by the accelerator, which include material in the target and associated activation products, to the transfer or distribution of material to another license for preparation of the final product (e.g., radioactive drugs). It does not include the operation of the accelerator, because NRC does not regulate the accelerator or its operation. It also does not include neutron accelerators and other types of accelerators (e.g., linear accelerators) that are used to produce particle beams and not radioactive materials. Many of these have other licenses to produce PET radioactive drugs, process the accelerator-produced radionuclides into other finished products, processing raw material and/or sources without the use of an accelerator, or distribute these processed materials to users as finished products.

Manufacturing and Distribution Broad-Type A, 1-5 Locations **Program Code 03211**

**Manufacturing and Distribution Broad-Type A
6-20 Locations** **Program Code 04010**

**Manufacturing and Distribution Broad-Type A
More Than 20 Locations** **Program Code 04011**

Manufacturing and Distribution Broad-Type A licenses are issued to larger organizations where there is often quite a diversity in the use of various radionuclides. The kinds and uses of radionuclides may change frequently, even within the same organization. Broad-Type A licenses are used for programs run by a Radiation Safety Committee that designates the authorized users of the material. The Radiation Safety Committee also has a full-time Radiation Safety Officer (RSO). These licenses authorize the possession and use of a wide variety of radioactive material without having each radionuclide and authorization specifically listed on the license. Quantities are usually in the multicurie range. (See also the introductory remarks and Broad-Type A description in 10 CFR Part 33.)

Leak Test Service Only, 1-5 Locations

Program Code 03220

Leak Test Service Only 6-20 Locations

Program Code 04424

Leak Test Service Only More Than 20 Locations

Program Code 04425

Leak Test Service Only licenses are issued to commercial service organizations (those that offer their services to other licensees) for the possession and use of radioactive material for leak testing sealed sources or devices containing sealed sources, analyzing leak test samples, and supplying preregistered leak test kits. Many facilities own or lease equipment, such as gauges or industrial radiographic cameras, containing sealed sources that have to be periodically tested for removable contamination. This is usually done by wiping the potentially contaminated surfaces of the device or, in some cases, the surface of the sealed source, and analyzing the wipe for radioactive contamination. If other services than “only” leak testing are performed, then a program code for “other services” may be used.

Licensees paying fees under 3.N. are not subject to paying fees under 3.P., 3.P.1, or 3.P.2 for calibration or leak testing services authorized on the same license.

Program Code 03221

**Instrument Calibration Services Only,
Source Less Than or Equal to 100 Curies 6-20 Locations**

Program Code 04426

**Instrument Calibration Services Only, Source Less Than
or Equal to 100 Curies More Than 20 Locations**

Program Code 04427

These Instrument Calibration Service Only licenses are issued to commercial service organizations (those that offer their services to other licensees) for the possession and use of sealed sources for calibration of radiation survey and monitoring instruments. Each source must have less than or equal to 100 curies [3.7 TBq] of radioactive material. If other licensed services than “only” calibration are performed, then the “other services” program code may be used.

Licensees paying fees under 3.N. are not subject to paying fees under 3.P. 3.P.1, or 3.P.2 for calibration or leak testing services authorized on the same license.

10 CFR Citation: Part 30
Fee Category: 3P, 3P(1), 3P(2)
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

**Instrument Calibration Service Only,
Source Greater Than 100 Curies, 1-5 Locations**

Program Code 03222

**Instrument Calibration Service Only,
Source Greater Than 100 Curies 6-20 Locations**

Program Code 04428

**Instrument Calibration Service Only,
Source Greater Than 100 Curies More Than 20 Locations**

Program Code 04429

These Instrument Calibration Service Only licenses are issued to service organizations (those that offer their services to other licensees) for the possession and use of sealed sources for commercial calibration of radiation survey and monitoring instruments. One or more sources has more than 100 curies [3.7 TBq] of radioactive material. If other licensed services than “only” calibration are performed, then the “other services” program code may be used.

Licensees paying fees under 3.N. are not subject to paying fees under 3.P. for calibration or leak testing services authorized on the same license.

10 CFR Citation: Part 30
Fee Category: 3P, 3P(1), 3P(2)
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Other Services for Sources Less Than or Equal to 100 Curies

Program Code 03225

Other Services licenses are issued to service organizations (those that offer their services to other licensees) for the possession and use of radioactive material for commercial services, such as teletherapy or industrial gauge servicing, that are not covered in the descriptions for program codes 03220-03222.

Licensees paying fees under 3.N. are not subject to paying fees under 3.P. 3.P.1, or 3.P.2, for calibration or leak testing services authorized on the same license.

10 CFR Citation: Part 30
Fee Category: 3N
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Other Services for Sources Greater Than 100 Curies

Program Code 03226

Other services licenses for sources greater than 100 curies are issued to service organizations (those that offer their services to other licensees) for the possession and use of radioactive material for commercial servicing of units with a sealed source greater than 100 curies, such as medical teletherapy or gamma stereotactic radiosurgery units, irradiator units or panoramic irradiator facilities that are not covered in the descriptions for program codes 03220-03224. (**Note:** Although the individual sealed sources for the gamma stereotactic radiosurgery units are 32-36 curies, the sources are considered in the aggregate when considering the activity for this program code because they produce a single radiation field during servicing.)

Licensees paying fees under 3.N. are not subject to paying fees under 3.P. for calibration or leak testing services authorized on the same license.

Fee Category: 3N
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 2

Waste Disposal (Burial)

Program Code 03231

Waste Disposal (Burial) licenses authorize the commercial disposal of radioactive wastes containing byproduct, source, and special nuclear material received from other persons. They are also used as a secondary code for organizations authorized to dispose of their own waste (noncommercial).

10 CFR Citation: Parts 20, 30, and 61
Fee Category: 4A
10 CFR 170.31 License and Inspection Fee

Inspection Priority: 2

10 CFR 171.16 Annual Fee

Waste Disposal Service Prepackaged Only

Program Code 03232

Waste Disposal Service Prepackaged Only licenses authorize the pick-up, transportation, and storage of only already-packaged wastes. This license does not authorize the opening of the packages.

10 CFR Citation: Part 30
Fee Category: 4C
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 3

Waste Disposal Service Incineration

Program Code 03233

Waste Disposal Service Incineration licenses authorize the commercial receipt of wastes from other persons and disposal of the wastes by incineration.

10 CFR Citation: Section 20.2004 and Part 30
Fee Category: 4A
10 CFR 170.31 License and Inspection Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 2

Waste Disposal Service Processing and/or Repackaging

Program Code 03234

Waste Disposal Service Processing and/or Repackaging licenses authorize the receipt of packaged wastes from other persons, opening of the packages, compacting and repackaging of wastes, and transfer to an authorized burial ground for disposal.

10 CFR Citation: Part 30
Fee Category: 4B
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 2

Incineration, Noncommercial
(SECONDARY CODE ONLY)

Program Code 03235

Incineration, Noncommercial licenses are issued to organizations authorized to incinerate their own radioactive wastes, under 10 CFR 20.2004.

10 CFR Citation: Section 20.2004 and Part 30
Fee Category: N/A

Inspection Priority: N/A

Waste Treatment Service (Other Than Compaction)

Program Code 03236

Waste Treatment Service (Other Than Compaction) licenses authorize both the receipt of wastes from other persons and treatment operations more complicated than compacting and repackaging of wastes, and the transfer to an authorized burial ground for disposal. Waste Treatment Service licenses authorize the physical or chemical treatment of contaminated soil and other solid, liquid, and gaseous wastes. Such waste treatment authorizes removing radioactive materials from waste, reducing the volume of the waste, changing the form of waste,

or other similar operations to allow for the transfer of the treated waste to an interim storage facility or an authorized burial ground for disposal. For contaminated soil or water, this includes activities related to site evaluation before waste treatment. This code should not be used for incineration. Program codes 03233 or 03235 (secondary code) should be used for incineration.

10 CFR 171.16 Annual Fee

General License Distribution–32.51

Program Code 03240

General License Distribution–32.51 licenses are issued to organizations for the transfer of byproduct material in sealed sources contained in devices to persons who may be general licensees under 10 CFR 31.5. (Licenses authorizing manufacture and distribution are described in program codes 03211-03214.) General licenses under 10 CFR 31.5 are issued to commercial and industrial firms and to research, educational, and medical institutions for possession of material in devices designed for detecting, measuring, gauging, or controlling density, thickness, radiation leakage, or chemical composition, or for producing light or an ionized atmosphere.

10 CFR Citation: Section 32.51
Fee Category: 3J
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

General License Distribution–32.53

Program Code 03241

General License Distribution–32.53 licenses are issued to organizations for the distribution of luminous aircraft safety devices to persons who may be general licensees under 10 CFR 31.7. General licenses under 10 CFR 31.7 are issued for possession and use of tritium or promethium-147 contained in luminous aircraft safety devices, where the device contains less than 10 curies [370GBq] of tritium or 300 millicuries [11.1 GBq] of promethium-147.

10 CFR Citation: Section 32.53
Fee Category: 3J
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

General License Distribution–32.57

Program Code 03242

General License Distribution–32.57 licenses are issued to organizations for the distribution of calibration or reference sources to persons who may be general licensees under 10 CFR 31.8. General licenses under 10 CFR 31.8 are issued for possession and use of americium-241 in calibration and reference sources. A person may be a general licensee under this provision only if they already possess a specific license.

10 CFR Citation: Section 32.57
Fee Category: 3K
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

General License Distribution–32.61

Program Code 03243

General License Distribution–32.61 licenses are issued to organizations for the distribution of ice detection devices to persons who may be general licensees under 10 CFR 31.10. General licenses under 10 CFR 31.10 are issued for possession and use of strontium-90 in ice detection devices.

10 CFR Citation: Section 32.61
Fee Category: 3J
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

General License Distribution–32.71

Program Code 03244

General License Distribution–32.71 licenses are issued to organizations for the distribution of byproduct material to persons who may be general licensees under 10 CFR 31.11. General licenses under 10 CFR 31.11 are issued to physicians, hospitals, clinical laboratories, or veterinarians in the practice of veterinary medicine for the possession of specified byproduct material in prepackaged units for use in certain in vitro clinical or laboratory tests.

10 CFR Citation: Section 32.71
Fee Category: 3K
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Exempt Distribution–32.11: Exempt Concentrations and Items **Program Code 03250**

These Exempt Distribution licenses authorize (i) the introduction of byproduct material into a product or material owned by or in the possession of the licensee or another, (ii) the transfer of ownership or possession of the material or product containing the byproduct material to persons exempt under 10 CFR 30.14 from licensing requirements, and (iii) the introduction of exempt concentrations of byproduct material into products that occur as a result of irradiation using a reactor and/or an accelerator. The residual byproduct material in a product must be the result of use of byproduct material for another purpose (e.g., a tracer study in a refinery could result in residual contamination of the gasoline, kerosene, or heating oil being produced by the refinery).

10 CFR Citation: Section 32.11
Fee Category: 3I
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Exempt Distribution–32.14: Certain Items

Program Code 03251

These Exempt Distribution licenses authorize the initial transfer for sale or distribution of certain products containing byproduct material, as specified in 10 CFR 30.15 to persons exempt from licensing requirements.

10 CFR Citation: Section 32.14
Fee Category: 3I
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Exempt Distribution–32.18: Small Quantities

Program Code 03253

These Exempt Distribution licenses authorize the commercial distribution of small quantities of byproduct material to persons exempt under 10 CFR 30.18 from licensing requirements.

10 CFR Citation: Section 32.18
Fee Category: 3I
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Exempt Distribution–32.22: Self Luminous Products

Program Code 03254

These Exempt Distribution licenses authorize the initial transfer of self-luminous products containing tritium, krypton-85, or promethium-147 to persons exempt under 10 CFR 30.19 from licensing requirements.

10 CFR Citation: Section 32.22
Fee Category: 3H
10 CFR 170.31 License Fee

Inspection Priority: 5

10 CFR 171.16 Annual Fee

Exempt Distribution–32.26: Smoke Detectors

Program Code 03255

These Exempt Distribution licenses authorize the initial transfer of gas and aerosol detectors containing byproduct material and are designed to protect life or property from fire and airborne hazards to persons exempt under 10 CFR 30.20 from licensing requirements.

10 CFR Citation: Section 32.26
Fee Category: 3H
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Exempt Distribution–32.21: Carbon-14 Urea Capsules

Program Code 03256

These Exempt Distribution licenses authorize the commercial distribution of a radioactive drug containing one microcurie of carbon-14 to persons exempt under 10 CFR 30.21 from licensing requirements.

10 CFR Citation: Section 32.21
Fee Category: 3I
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Exempt Distribution–32.30: Certain Industrial Devices

Program Code 03257

These Exempt Distribution licenses authorize the initial transfer for sale or distribution industrial devices containing byproduct material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere to persons exempt under 10 CFR 30.22 from licensing requirements.

10 CFR Citation: Section 32.30

Industrial Radiography Fixed Location, 1-5 Locations

Program Code 03310

Industrial Radiography Fixed Location 6-20 Locations

Program Code 04310

Industrial Radiography Fixed Location More Than 20 Locations

Program Code 04311

Industrial Radiography Fixed Location licenses are issued for the possession and use of sealed radioactive materials in exposure devices. These licenses are issued to organizations to conduct activities only at permanent facilities, usually designed and shielded for radiography; however, a “field site” could be authorized as a place of use.

This category also includes the possession and use of source material for shielding authorized under Part 40 of this chapter when included on the same license.

10 CFR Citation: Section 34.11
Fee Category: 3O, 3O(1), 3O(2)
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 2

Industrial Radiography Temporary Job Sites, 1-5 Locations **Program Code 03320**

Industrial Radiography Temporary Job Sites 6-20 Locations **Program Code 04312**

Industrial Radiography Temporary Job Sites More Than 20 Locations **Program Code 04313**

Industrial Radiography Temporary Job Sites licenses are issued for the possession and use of sealed radioactive materials in exposure devices. These licenses are issued to organizations to conduct activities at multiple temporary locations.

This category also includes the possession and use of source material for shielding authorized under Part 40 of this chapter when included on the same license.

10 CFR Citation: Section 34.11

Research and Development Broad-Type A, 1-5 locations

Program Code 03610

Research and Development Broad-Type A 6-20 Locations

Program Code 04610

Research and Development Broad-Type A More Than 20 Locations

Program Code 04611

Research and Development Broad-Type A licenses are issued to larger organizations where there is a diversity in the use of various radionuclides. The kinds and uses of radionuclides may change frequently, even within the same organization. Broad-Type A licenses are used for programs run by a Radiation Safety Committee that designates the authorized users of the material. The Radiation Safety Committee also has a full time Radiation Safety Officer (RSO). These licenses are issued for the possession and use of a wide variety of radioactive material without having each radionuclide and authorized use listed on the license. Quantities are usually in the multicurie range. (See also the introductory remarks and Broad-Type A description in 10 CFR Part 33).

Master Materials Licenses

Program Code 03614

A Master Materials License (MML) is a material (byproduct, source, and/or special nuclear material) license issued to a Federal organization, authorizing use of material at multiple sites in multiple regions. The Navy, Air Force, and Veterans' Administration are the only MML licensees

at this time. The MML authorizes the licensee to issue permits for the possession and use of licensed material under the license and ties the licensee to a framework for oversight and internal licensee inspection of the MML.

Byproduct Material Possession Only–Permanent Shutdown 6-20 Locations **Program Code 04430**

Byproduct Material Possession Only–Permanent Shutdown More Than 20 Locations **Program Code 04431**

Byproduct Material Possession Only–Permanent Shutdown licenses authorize possession and/or storage of residual contamination or other byproduct material in anticipation of removal of all licensed material and eventual termination of the license. This license is for licensees that have stated in writing that they have permanently ceased operations with no intent to restart. A formal request for license termination is not required at this time. Only packaging and shipping operations necessary to remove licensed materials from the site are authorized. No decontamination or other work involving byproduct material is authorized. [This code should not be used for licenses covered by program codes 03232, 03900, or 06100. Additionally, program codes that were used previous to this one should be used as secondary codes to ensure traceability of license types within the Web-based Licensing (WBL) system].

Source Material General License Distribution—40.34

Program Code 11230

Source Material General License Distribution licenses authorize the initial transfer of certain industrial products and devices containing depleted uranium to persons who have been issued a general license under 10 CFR 40.25. (The general license in 10 CFR 40.25 authorizes the receipt, acquisition, possession, use, or transfer of depleted uranium contained in industrial

products or devices for the purpose of providing a concentrated mass in a small volume of the product or device.)

Fee Category: 2D
10 CFR 170.31 License Fee
10 CFR 171.16 Annual Fee

Inspection Priority: 5

Source Material General License Distribution–40.54

Program Code 11231

Source Material General License Distribution licenses authorize the initial transfer of uranium and thorium, in their natural isotopic concentrations and in the form of depleted uranium, for research, development, educational, commercial, or operational purposes who have been issued a general license under 10 CFR 40.22.

Exempt Distribution–Source Material distribution 40.52

Program Code 11240

Applicants for a specific license to apply source material to, incorporate source material into, manufacture, process, or produce the products specified in 10 CFR 40.13(c) or to initially transfer for sale or distribution any products containing source material for use under 10 CFR 40.13(c) apply under 10 CFR 40.52, "Certain Items Containing Source Material; Requirements for License To Apply or Initially Transfer."

Uranium Hexafluoride Conversion and Deconversion Plants

Program Code 11400

Uranium Hexafluoride Conversion and Deconversion Plant licenses are issued for the possession and use of uranium to allow the conversion of yellowcake and/or ore concentrates to uranium hexafluoride (UF₆) or the deconversion of UF₆ to uranium oxides for disposal. This program code does not apply to uranium hexafluoride source material used in enrichment or in processing of special nuclear material.

10 CFR 171.16 Annual Fee

Inspection Priority: 1/0

Basic *In Situ* Recovery Facilities

Program Code 11500

Basic *in situ* recovery facility licenses are issued for *in situ* recovery yellowcake facilities with zero to three satellites. These facilities include a central processing plant (CPP) that includes all the equipment necessary to collect uranium on resin, strip uranium from the resin, and process the uranium into a yellowcake slurry or dried yellowcake powder. These facilities may also receive resins from up to three satellite facilities operated by the same company for further processing of the contained uranium into yellowcake.

Heap Leach (pre-2009), Ore Buying Stations and Byproduct Recovery

Program Code 11600

Heap Leach, Ore Buying Stations and Byproduct Recovery licenses are issued for the recovery of source material from low-grade uranium ores, from old tailings piles, or from a small ore body at a location distant from the mill complex. The heap leach process consists of spraying or trickling an acid solution over sections of the heap pile. Pipes or covered drains in the base of the pile collect the uranium-enriched solution after it percolates through the heap.

Rare Earth Extraction and Processing

Program Code 11700

Rare Earth Extraction and Processing licenses are issued for the possession and use of source material for processing activities not directly related to the nuclear fuel cycle. This category includes licenses for extraction of metals, heavy metals, and rare earths. The extraction may be accomplished by a number of different methods, with the source material generally considered to be a waste product. This program code category is not used for milling operations (program code 11100), licenses for uranium hexafluoride production (program code 11400), or licenses for processing and recovery of source material in in situ or heap leaching operations (program code 11500).

Inspection Priority: 3

Source Material Possession Only–Permanent Shutdown

Program Code 11800

Source Material Possession Only Permanent Shutdown licenses authorize possession and/or storage of residual contamination, tailings piles, slag piles, or other source material in anticipation of removal of all licensed material and eventual termination of the license. This license is for licensees that have stated, in writing, that they have permanently ceased operations with no intent to restart. A formal request for license termination is not required at this time. Only packaging and shipping operations necessary to remove licensed material from the site are authorized. No decontamination or other work involving the material is authorized. (Program codes that were used previous to this one should be used as secondary codes to ensure traceability of license types within WBL.)

Uranium Enrichment Plants

Program Code 21200

Uranium Enrichment Plants licenses are issued for the possession and use of source and special nuclear material for the purpose of enriching natural uranium in the U-235 isotope. Existing and planned plants enrich uranium in the form of uranium hexafluoride, either by gaseous diffusion or gas centrifuge methods. Future plants may use other forms of uranium and methods of enrichment. Plants whose product is for eventual use in commercial power reactors enrich uranium up to about 5% U-235, while plants whose product is for naval reactor propulsion enrich uranium to greater than 90% U-235.

Uranium Fuel Fabrication (LEU)

Program Code 21210

Uranium Fuel Fabrication (LEU) licenses are issued for the possession and use of special nuclear material for the purpose of fabricating reactor fuel containing low-enriched uranium. In most facilities, low-enriched uranium hexafluoride is converted to uranium dioxide pellets and inserted into zirconium tubes. The tubes are fabricated into fuel assemblies, which are shipped to commercial nuclear power plants. Licenses are for possession and use of 5 kilograms or more of uranium-235 that has been enriched to less than 20 percent.

**Decommissioning of Other SNM Facilities–
Less Than Critical Mass**

Program Code 22200

Decommissioning of Other SNM Facilities–Less Than Critical Mass licenses are issued for facilities not covered by other SNM program codes, that have notified NRC of their intent to terminate all or part of their activities involving special nuclear material and are authorized to decommission the facility(s). A plan may have been submitted for decontaminating the property and equipment so that it may be released for unrestricted use. This includes licensees performing decontamination, decommissioning, reclamation, or site restoration in order to release a facility. This program code is used only when the license specifically authorizes decommissioning or decontamination.

Fresh Fuel Storage at Reactor Sites

Program Code 23100

Fresh Fuel Storage at Reactor Sites licenses are issued to commercial nuclear power reactors that have been granted a Construction Permit (CP) but not an Operating License (OL). These licenses authorize the storage of new unirradiated reactor fuel elements containing special nuclear material. Once a reactor has been granted an OL, this Part 70 materials license is terminated. (The OL includes authorization for possession of the fuel.)

Interim Spent Fuel Storage

Program Code 23200

Interim Spent Fuel Storage licenses are issued under 10 CFR Part 72 for possession of power reactor spent fuel and other radioactive materials associated with spent fuel storage, in an independent spent fuel storage installation. These licenses are issued for up to 20 years.

SNM Possession Only (Non-Fuel)–Permanent Shutdown

Program Code 23300

SNM Possession Only (Non-Fuel)–Permanent Shutdown licenses authorize possession and/or storage of residual contamination or other special nuclear material in anticipation of removal of all licensed material and eventual termination of the license. This license is for licensees that have stated in writing that they have permanently ceased operations with no intent to restart. A formal request for license termination is not required at this time. Only packaging and shipping operations necessary to remove licensed materials from the site are authorized. No decontamination or other work involving the material is authorized. This category does not include storage of fresh reactor fuel or spent reactor fuel (see program codes 23100 and 23200). (Program codes that were used previous to this one should be used as secondary codes to ensure traceability of license types within WBL.)

Inspection Priority: 2

SNM Standby (Non- Fuel)–No Operations

Program Code 23310

SNM Standby (Non-Fuel)–No Operations licenses authorize possession and/or storage of SNM for licensees that are not conducting the principal activity for which the license was issued, but have not yet decided to cease operations permanently. Only packaging and shipping operations necessary to remove licensed material from the site are authorized. No decontamination or other work involving the material is authorized. This category does not include storage of fresh reactor fuel or spent reactor fuel (See program codes 23100 and 23200). (Program codes that were used previous to this one should be used as secondary codes to ensure traceability of license types within WBL.)

Transport-Private Carriage

Program Code 25110

Transport-Private Carriage licenses are issued for the possession of byproduct, source, and special nuclear materials in packages authorized under Part 71, and in private carriage from a carrier's terminal to the licensee's facility, all within the United States.

Nexus to NRC SNM Order to NRC Agreement State licensee

Program Code 26000

Under an Agreement authorized by the Atomic Energy Act, as amended (AEA), the NRC can relinquish and a State can assume, regulatory authority over radioactive material specified in an Agreement with NRC, such as over special nuclear material (SNM) less than a critical mass. An NRC SNM Order to an NRC Agreement State licensee is effective without further NRC order or

proceedings when the NRC SNM Order Conditions are incorporated by the State into the State's license. An NRC SNM Order also enables the State to regulate SNM greater than a critical mass at the location of the State's license.
