On July 22, 2014, the NRC published a document in the *Federal Register* (79 FR 42452) correcting a final rule that appeared in the *Federal Register* on June 30, 2014 (79 FR 37124), that amends the licensing, inspection, and annual fees charged to the NRC's applicants and licensees. The American Society of Mechanical Engineers (ASME)/ American Nuclear Society (ANS)
Probabilistic Risk Assessment (PRA) Standard-based Peer Review of Level 3PRA
(L3PRA) Project Reactor

During the week of July 21-25, 2014, RES staff hosted and supported a week-long ASME/ANS PRA Standard-based peer review of the Level 3 PRA (L3PRA) project reactor, at-power, Level-1 internal event and internal flood models for Vogtle Electric Generating Plant, Units 1 and 2. The peer review was led by the PWR Owners Group, and the review team included members from Westinghouse, several utilities, an SRA from Region III, and a staff member from the Office of New Reactors, Division of Safety Systems & Risk Assessment. This peer review is one level of review that all L3PRA models undergo, as specified in the L3PRA Quality Assurance Plan (Section 18 of the L3PRA Technical Analysis Approach Plan [ADAMS Accession No. ML13296A064]). Since the L3PRA Level-1 internal event and internal flood models were adapted from the licensee's PRA models for Vogtle, which were previously peer reviewed, a focused-scope peer review was performed for the NRC models. While the primary focus of the peer review was on those areas of the models that were modified by the NRC, the review covered all of the supporting requirements in the ASME/ANS Level-1 PRA Standard. Subsequent to the peer review, a formal peer review report will be provided to the staff, which will then be used to improve the quality of the L3PRA models.

Staff Presentation for the San Onofre Citizens Engagement Panel Workshop

On July 17, 2014, staff presented on the NRC reactor decommissioning process for the San Onofre Citizens Engagement Panel Workshop in San Clemente, CA. The presentation focused on the NRC's review of the Post Shutdown Decommissioning Activities Report and the License Termination Plan. The workshop was attended by approximately 65 members of the community and was intended as an information session to describe the upcoming decommissioning activities at San Onofre Nuclear Generating Station.

Public Meeting Regarding GSI-191 Simplified Risk Informed Approach

On July 22, 2014, staff met with industry in a public meeting at NRC Headquarters to propose a simplified approach to the South Texas Project (STP) pilot process currently under staff review. Discussions included lessons learned from the ongoing pilot application and how they could be applied, on a plant specific basis, to limit the time and resources required to both submit and review applications. The simplified approach, as described in this high level presentation, was well received. After further development of the approach by industry, follow on meetings will be scheduled.
